Title: Managing business relationships in e-services using business commitments

Abstract: With the rapid advancement of e-service technology, there is a need to manage business relationships among business entities such as service providers, service consumers, and internal departments. We have proposed a novel approach to business relationship management using business commitments and associated business commitment hubs. Business commitments are commitments related to business issues such as service levels in service agreements, and terms and conditions in procurement contracts. The concept of business commitments has captured the essence of business relationships in e-services. Based on case studies, we have envisioned the need of establishing a business commitment hub to centrally manage the external relationships with trading partners and the internal relationships with internal departments. A language called business commitment language (BCL) has been proposed to specify business commitments. These business commitments are used to monitor and control the execution status of e-services. Conceptually, the business commitment hub has two related subsystems: the active subsystem and the dashboard subsystem. The active subsystem responds to business events received from business entities. The dashboard subsystem visually displays the key data and the execution status of business commitments.

Business agreement interactions visualizing method for companies, involves displaying parties of three types as nodes in three different regions of view window, and displaying agreements between parties as lines between nodes

Patent Assignee: CASATI F (CASA-I); DAYAL U (DAYA-I); HAO M C (HAOM-I);

MACHIRAJU V (MACH-I) ; SAHAI A (SAHA-I)

Inventor: CASATI F; DAYAL U; HAO M C; MACHIRAJU V; SAHAI A

Patent Family (1 patents, 1 countries)

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 20050119932	A1	20050602	US 2003725624	A	20031202	200542	B

Alerting Abstract US A1

NOVELTY - The method involves dividing parties into three types such as customers, providers and suppliers, and displaying parties of the three types as nodes in three different regions of a view window (402). Agreements between parties are displayed as lines (412, 414, 416) between the corresponding nodes. The lines are displayed with a characteristic indicative of when a violation of a represented agreement condition has occurred.

DESCRIPTION - An INDEPENDENT CLAIM is also included for an information carrier medium configured to provide software for visualizing business agreement interactions to a computer.

USE - Used for visualizing business agreement interactions for use by companies.

ADVANTAGE - The method efficiently visualizes the business agreement interactions, thus making it easy for a company to understand its contractual obligations, and improving company performance.

Contract data formulator for hierarchical information management systems

Patent Assignee: HEWLETT-PACKARD CO (HEWP)

Inventor: CHEN Q; DAYAL U

Patent Family (1 patents, 1 countries)

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 5903891	A	19990511	US 1997804990	A	19970225	199926	B

Alerting Abstract US A

NOVELTY - The contract process (22) obtains a set of data updates from the interacting transaction of each of the first and second processes (66,68) prior to their completion and generate a set of contract data based on the data updates. The generated data are held till the completion of the first and second processes.

USE - For producing contract data by sharing intermediate data for hierarchical information management system in various business related and other applications.

ADVANTAGE - The contract process permits sharing of intermediate data and formulating contract data without sacrificing data integrity control.

...DAYAL, UMESHWAR

People, technology, and processes are the principal ingredients of any outsourcing business, and maintaining a delicate balance among them is crucial for success. Reducing inefficiency -- lack of...

...to give IT decision makers access to realtime information that will help them take timely business actions such as reorganizing processes and reallocating resources. In this article, we'll describe an architecture that enables realtime decision making for a typical IT outsourcing business as well as any IT department, taking into account complexity and size (the price-benefit ratio being the critical decision-making factor here).

OUTSOURCING BUSINESS LANDSCAPE

The estimated size of the outsourcing market today is between \$120 billion and \$160 billion, with business-process outsourcing having the strongest growth rate. The business takes three principal forms: management of IT infrastructure (networks, servers, applications, and help desks); leased processing services (transaction processing, email, payroll, and back office); and management of business processes (supply chain, logistics, and human resources).

The essence of outsourcing is to take advantage...

...as electricity gas, or water. The key benefit for the customer lies in the rapid business-rescaling capabilities (up or down). In the case of a rapid surge or drop in...

...however, that reliability, scalability, dependability, and security are other important dimensions of this architecture.

OUTSOURCING BUSINESS MANAGEMENT PLATFORM

Managing any system entails establishing closed-loop control, in which the managed system... ..operational parameters within prescribed ranges. (See Table 1.)

As we discussed earlier, managing an outsourcing business involves efficiently and effectively managing people, processes, and resources. Doing so requires a management platform that enables the monitoring of the whole business domain, while providing the means to interact quickly and appropriately with the managed domain in... ..aimed at minimizing the overall propagation time for relevant information to be delivered.

Most outsourcing business management platforms support operational centers and help/service desks that respond to events and calls...

...that the vendor provides desktop software distribution, upgrades, daily maintenance, and troubleshooting.

Managing the outsourcing business involves deploying several intricate technologies and

involving people who participate in well-established and well...

...architectural frame-work for IT outsourcing, the realtime decision-support system mediates between the running business and various decision makers. The complexity of the system derives from the nature and scope of the supported business and the information needs of the human decision makers supported by the system.

For example...In this case, the Decision-Support Console could track realtime compliance with the service level agreement (SLA), calculate the best possible compliance that can be achieved in the time remaining, and...
...incoming traffic and service deterioration.

MESSAGE BROKER MANAGEMENT

Designing the management platform for the outsourcing business is a hugely complex task involving several difficult requirements as well as intricate technical challenges...

...operational systems are fused into an operational portal view. News and various internal and external business tickers are integrated into the view. Summaries from various communication channels (phone, voicemail, and pager...

...rendered through a message brokering architecture setup in which we suppose, for illustrative purposes, a business situation arises in which two key customer accounts are having problems: One account shows a...

...create an inflow of events (1) from the infrastructure, which will be checked against stored business logic thresholds, and the necessary information about the customer account (2) retrieved. Directory information (3...

...of services.

At the lowest level of the architecture, heterogeneous and distributed data, applications, and business processes must be integrated. Everyone intuitively understands the importance of integration, but although several enterprises...

...million events per day, and a major shipping and delivery company has integrated its whole business using the same approach.

There are two main architectural directions here: request brokering (such as...outsourcing domain and maps the low-level infrastructure events and service events into high-level business events and decisions.

Considering that some of the hosted businesses are critical and that downtime is expensive or nearly prohibitive, the specific architecture of the...

Title: Visual mining business service using pixel bar charts
Author: Hao, Ming C.; Dayal, Umeshwar; Casati, Fabio
Abstract: ...data. Finding the valuable information hidden in the data is essential to the success of business. We describe a new visualization technique called pixel bar charts, which are derived from regular... ..exceptions besides aggregated data. The approach is to represent each data item (e.g. a business transaction) by a single pixel in the bar chart. The attribute of each data item... ..color mappings are used to represent multiple attributes. This technique has been prototyped in three business service applications - Business Operation Analysis, Sales Analysis, and Service Level Agreement Analysis at Hewlett Packard Laboratories. Our applications show the wide applicability and usefulness of this...

Alerting Abstract US A1

NOVELTY - The method involves dividing parties into three types such as customers, providers and suppliers, and displaying parties of the three types as nodes in three different regions of a view window (402). Agreements between parties are displayed as lines (412, 414, 416) between the corresponding nodes. The lines are displayed with a characteristic indicative of when a violation of a represented agreement condition has occurred.

DESCRIPTION - An INDEPENDENT CLAIM is also included for an information carrier medium configured to provide software for visualizing business agreement interactions to a computer.

USE - Used for visualizing business agreement interactions for use by companies.

ADVANTAGE - The method efficiently visualizes the business agreement interactions, thus making it easy for a company to understand its contractual obligations, and improving company performance.

Alerting Abstract WO A2

NOVELTY - Engagement modules assist buyers and suppliers to engage in contractual relationships for supply of goods or services based at least in part on performance w.r.t. key performance indicators. Monitoring modules monitor performance of contractual relationships between buyers and suppliers based on the key performance indicators selected by the buyer and supplier.

DESCRIPTION - Collaboration modules enable buyers and suppliers to resolve issues. Execution modules execute an element of the contractual relationship. Adaptation modules update data stored for buyers and suppliers for use in engagements and performance monitoring. INDEPENDENT CLAIMS are included for:

1. a server system;
2. a method for enabling buyers and suppliers to participate in a performance-based supply chain:
3. a method for monitoring performance of a buyer-supplier relationship:
4. a stateless, event-monitoring computer system.

USE - For providing performance-based end-to-end supply chain management.

ADVANTAGE - Provides context-specific, dynamically-created collaboration environment to resolve issues both synchronously and asynchronously.

Service level agreement (SLA) management method involves constructing decision tree from status data logged during execution of completed process instance of composite web service and data set identifying instance satisfying criteria of SLA

Patent Assignee: CASATI F (CASA-I); CASTELLANOS M G (CAST-I); SHAN M (SHAN-

I)

Inventor: CASATI F; CASTELLANOS M G; SHAN M

Patent Family (1 patents, 1 countries)

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 20050172027	A1	20050804	US 2004770288	A	20040202	200561	B

Alerting Abstract US A1

NOVELTY - A decision tree is constructed from status data logged during execution of completed process instance of a composite web service and data set identifying the instance satisfying criteria of service level agreement (SLA). The instance attributes and subset of attributes are represented in node and branch of tree respectively. A probability value of the instances with attributes not satisfying criteria is indicated in leaf node.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

5. apparatus for managing service level agreement; and
6. article of manufacture for managing service level agreement.

USE - For management of service level agreement associated with composite web service.

ADVANTAGE - Provides information indicating the reasons for violation of the SLA and hence service providers are greatly benefited.

Abstract EP 1662418 A2

The present invention provides systems and methods for electronic commerce including secure transaction management and electronic rights protection. Electronic appliances such as computers employed in accordance with the present invention help to ensure that information is accessed and used only in authorized ways, and maintain the integrity, availability, and/or confidentiality of the information. Secure subsystems used with such electronic appliances provide a distributed virtual distribution environment (VDE) that may enforce a secure chain of handling and control, for example, to control and/or meter or otherwise monitor use of electronically stored or disseminated information. Such a virtual distribution environment may be used to protect rights of various participants in electronic commerce and other electronic or electronic-facilitated transactions. Secure distributed and other operating system environments and architectures, employing, for example, secure semiconductor processing arrangements that may establish secure, protected environments at each node. These techniques may be used to support an end-to-end electronic information distribution capability that may be used, for example, utilizing the "electronic highway".

Abstract EP 1643340 A3

A method of and apparatus for assembling software elements to form a component assembly (690) are described. A record (808) containing information identifying the software elements (1000, 1100, 1200, 1202, 690) to be assembled to form the component assembly is accessed. At least some of the software elements (1000, 1100) identified by the record comprise executable program code and at least one of the software elements is a load module (1100) comprising executable program code and a header (804) having an execution space identifier identifying which of a number of different security levels is required of a component assembly execution space. The software elements identified by the record are assembled to form a component assembly (690) that may, in use, be loaded and executed when the level of security of the component assembly execution space matches the level of security identified by the execution space identifier.

Electronic appliances such as computers equipped in accordance with the present invention help to ensure that information is accessed and used only in authorized ways, and maintain the integrity, availability, and/or confidentiality of the information. Such electronic appliances provide a distributed virtual distribution environment (VDE) that may enforce a secure chain of handling and control, for example, to control and/or meter or otherwise monitor use of electronically stored or disseminated information. Such a virtual distribution environment may be used to protect rights of various participants in electronic commerce and other electronic or electronic-facilitated transactions. Distributed and other operating systems, environments and architectures, such as, for example, those using tamper-resistant hardware-based processors, may establish security at each node. These techniques may be used to support an all-electronic information distribution, for example, the utilizing the "electronic higher".

English Abstract:

Methods and systems consistent with the present invention provide a data processing system having a business object model reflecting the data used during a business transaction. Consistent interfaces are generated from the business object model (100). These interfaces are suitable for use across industries, across businesses, and across different departments within a business during a business transaction.

English Abstract:

Methods and systems for engaging in enhanced parimutuel wagering and gaming. In one embodiment, different types of bets can be offered and processed in the same betting pool on

an underlying event, such as a horse or dog race, a sporting event or a lottery, and the premiums and payouts of these different types of bets can be determined in the same betting pool, by configuring an equivalent combination of fundamental bets for each type of bet, and performing a demand-based valuation of each of the fundamental bets in the equivalent combination. In another embodiment, bettors can place bets in the betting pool with limit odds on the selected outcome of the underlying event. The bets with limit odds are not filled in whole or in part, unless the final odds on the selected outcome of the underlying event are equal to or greater than the limit odds.

French Abstract:

L'invention concerne un systeme, un procede et un article de fabrication destines a fournir un schema financier de commerce virtuel. Premierement, un accord est etabli entre un acheteur et un vendeur pour des raisons de commerce. Puis, les documents de mise au point et de paiement sont recus via un reseau. Des documents complementaires sont egalement recus, tel qu'un certificat d'assurance, un certificat d'inspection, un certificat d'origine, une facture/declaration, une facture du conseiller, des declarations de sanction et de boycott, une liste de stationnement, une liste du poids, un rapport d'essai de laboratoire, et/ou un certificat de beneficiaire. Par la suite, les documents complementaires sont envoyes a une banque pour etre verifiees. Au cours de l'operation, l'acheteur accede aux documents via la banque.

English Abstract:

A system of reusable software parts for designing and constructing software components, applications and entire systems by assembly. Parts for generating events, shaping, distributing and controlling flows of events and other interactions are included. Also included are parts for handling synchronization and desynchronization of events and other interactions between parts, as well as parts for handling properties, parameterizing and serializing components, applications and systems. In addition, innovative adapter parts for interfacing parts that are not designed to work together are included. The system includes a dynamic container for software parts which supports integration of dynamically changing sets of parts into statically defined structures of parts. Other reusable parts for achieving such integration are also included.

Aren't there two parties in an employment relationship? Antecedents and consequences of organization-employee agreement on contract obligations and violations

Tekleab, Amanuel G; Taylor, M Susan
Journal of Organizational Behavior v24n5 pp: 585-608
Aug 2003
ISSN: 0894-3796 Journal Code: JBH

Abstract:

...perceptions of contract violations. Furthermore, the study examines subsequent reactions of both parties to perceived violations. Results indicate that managers and employees tend to disagree on the employee's obligations and violations of the contract but not on the organization's obligations and violations. More importantly, results from multivariate regression analyses indicate that employee tenure with the manager and leader...

The evaluation of IT ethical scenarios using a multidimensional scale

Ellis, T Selwyn; Griffith, David
Database for Advances in Information Systems v32n1 pp: 75-84

Winter 2001
ISSN: 1532-0936 Journal Code: DFA
Word Count: 4884
Text:

...recognize the violation of an unwritten contract in any of the scenarios. While many in business would believe that violation of contracts is far more serious than the violation of ethical norms, these results indicate that contracts must be more explicit than those in the scenarios in order to elicit contractual responses. Contractualism may be...

THE NEED IS URGENT FOR WHISTLEBLOWERS

SAN JOSE MERCURY NEWS (SJ) - Wednesday, January 31, 1990
Edition: Morning Final Section: Editorial Page: 6B
Word Count: 334

Text:

Recent bills introduced in Congress (HR 3255 and HR 3368) designed to protect whistleblowers who expose misconduct and health and safety violations by private firms working on federal contracts should be expanded.

Employees other than just those working on defense-related projects should have protections that allow them to...

Abstract: ...perceptions of contract violations. Furthermore, the study examines subsequent reactions of both parties to perceived violations. Results indicate that managers and employees tend to disagree on the employee's obligations and violations of the contract but not on the organization's obligations and violations. More importantly, results from multivariate regression analyses indicate that employee tenure with the manager and leader...
